## Megladon

From the news article [The guardian](#) , Megladon sharks used to live 3 million years ago but have disappeared from the ocean. The shark was *16 meters* long, which is the size of a school bus! And the head would have measured *4.65 meters* long and a tail that was *3.85 meters* long. Because its size was so massive, a human could be the same size as the dorsal fin, which is *1.62 meters* if they stood on the sharks back.
